

“Humanity is developing a sort of global eyesight as millions of video cameras on satellites, desktops, and street corners are connected to the Internet. In your lifetime, it will be possible to see almost anything on the planet from any computer. And society’s intelligence is merging over the Internet, creating, in effect, a global mind that can do vastly more than any individual mind. Eventually everything that is known by one person will be available to all. A decision can be made by the collective mind of humanity and instantly communicated to the body of society.

A billion years from now, if a visitor from another dimension observed humanity, he might perceive it to be one large entity with a consciousness and purpose, and not a collection of relatively uninteresting individuals.”

“Are you saying we’re evolving into God?”

“I’m saying we’re the building blocks of God, in the early stages of reassembling.”
